# ABS 2 C-BAND

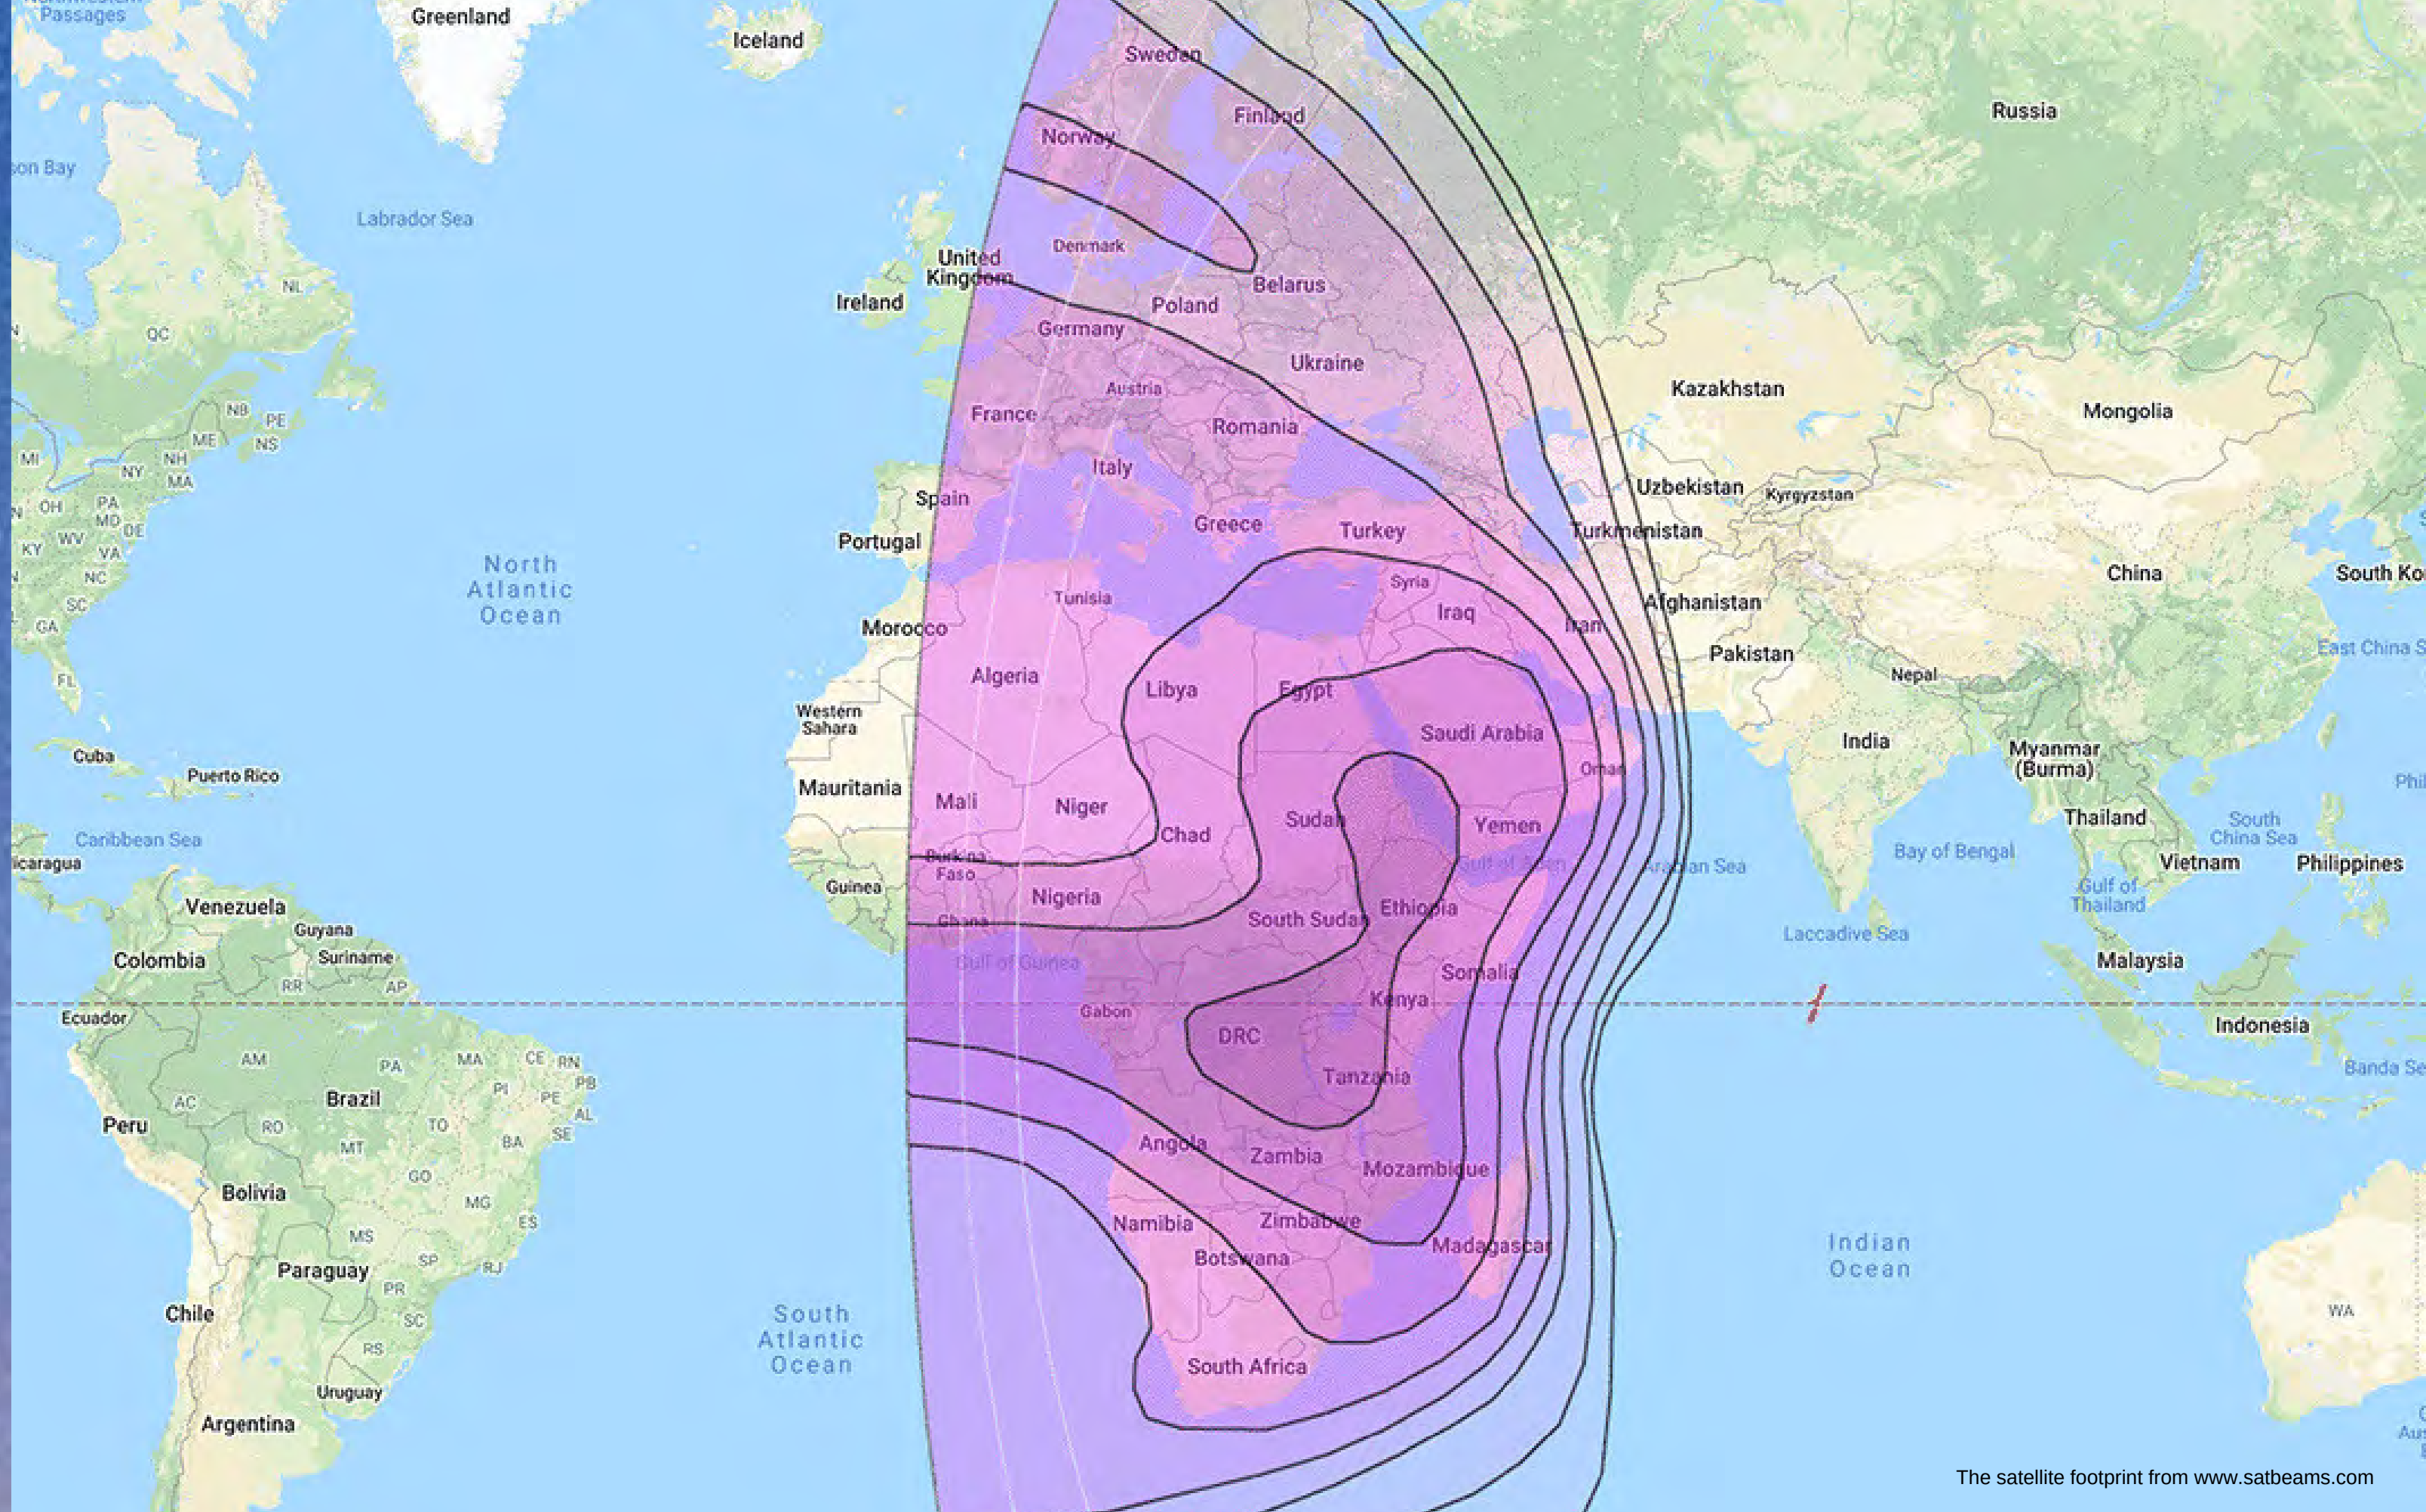

ABS bridges the gap between isolated rural areas and emerging markets to help expand the service coverage regardless of distance, geographic obstructions or lack of infrastructure.

The bordering nature of satellite coverage allows operators to locate mobile switching centers (MSC) and base station controller / transceiver (BSC/BTS) combinations anywhere within a wide footprint, giving operators incomparable independence in designing their network.

ABS 2 outruns its competitors through effective design and implementation of flexible and customized solutions.
